

## medin-NC3®

### The new generation of non-invasive respiratory support

medin-NC3 is the first turbine-driven CPAP device for non-invasive respiratory support for premature infants and newborns. The high-performance turbine makes the device independent of a fixed compressed air supply.

The proven MediTRIG technology is used in the ApneaCPAP mode. Powerful leakage compensation offsets leakages to ensure stable and effective therapy.

- ✓ All basic modes for NIV respiratory support
- ✓ High-flow
- ✓ Leakage compensation in all modes
- ✓ MediTRIG: Integrated trigger and apnea monitoring without additional sensor
- ✓ Independent of compressed air through a turbine
